

Classifying Quadrilaterals

Name: _____

Date: _____

Grade: Grade 4

Part A: Fix the Sentence

Each sentence has an error. Rewrite it correctly on the line.

1. Fix the sentence: A rhombus have four congruent sides in Grade 4 geometry.

Rewrite: _____

2. Fix the sentence: Every rhombus are a square with four right angles.

Rewrite: _____

3. Fix the sentence: The diagonals of a rhombus bisects each other at right angles.

Rewrite: _____

Part B: Fill in the Blank

Write the missing word or number on each line.

1. A Grade 4 rhombus has _____ congruent sides.
2. A rhombus looks like a _____ square because its angles can lean.
3. A square is a special rhombus that also has four _____ angles.
4. The diagonals of a rhombus _____ each other at the center.

Part C: Short Answer

Answer each question in one or two complete sentences.

1. Explain how a rhombus is similar to and different from a square in Grade 4 classification.

2. Describe two attributes you would check to confirm a shape is a rhombus in Grade 4 geometry.

Answer Key · Classifying Quadrilaterals · Grade: Grade 4

Part A: Fix the Sentence

Each sentence has an error. Rewrite it correctly on the line.

1. Fix the sentence: A rhombus have four congruent sides in Grade 4 geometry.

Rewrite: **A rhombus has four congruent sides in Grade 4 geometry.**

2. Fix the sentence: Every rhombus are a square with four right angles.

Rewrite: **Not every rhombus is a square with four right angles.**

3. Fix the sentence: The diagonals of a rhombus bisects each other at right angles.

Rewrite: **The diagonals of a rhombus bisect each other at right angles.**

Part B: Fill in the Blank

Write the missing word or number on each line.

1. A Grade 4 rhombus has **four** congruent sides.
2. A rhombus looks like a **tilted** square because its angles can lean.
3. A square is a special rhombus that also has four **right** angles.
4. The diagonals of a rhombus **bisect** each other at the center.

Part C: Short Answer

Answer each question in one or two complete sentences.

1. Explain how a rhombus is similar to and different from a square in Grade 4 classification.

A rhombus and a square both have four congruent sides. They are different because a square also has four right angles, while a rhombus may have angles that are not 90 degrees.

2. Describe two attributes you would check to confirm a shape is a rhombus in Grade 4 geometry.

First I would check that all four sides are congruent. Then I would check that opposite sides are parallel, since a rhombus is also a parallelogram with equal sides.
